

## SANDY-W1 PROFILE SANDER

The very latest profile sander design. It is fitted as standard with a compensating cylinder which ensures that the sanding disc applies uniform pressure to the strip even if the material is slightly warped. The pressure can be adjusted individually.

The benefit of the new machine design is the sanding unit whose angle can be infinitely adjusted. The machine identifies the length of the strips and automatically adjusts the feed rate of the sanding disc. Its Moeller controller makes the SANDY very easy to operate.

### Technical data

Sanding discs up to  $\varnothing 200$  mm; Width up to 100 mm; Belt feed infinitely adjustable from 3 – 30 m/min  
Belt width 150 mm; Sanding motor rating 2.2 kW; Infinitely adjustable speed up to 1800 rpm
